Scientific Method illustrations carefully and consistently lead students through the steps of some of the most interesting experiments and studies.

FIGURE 10.4 Scientific Method: Mere Exposure and Musical Preferences

Hypothesis: Exposure leads to liking.

Research Method:

- 1 One group of rats was raised for the first 52 days of life in an environment in which Mozart was played for 12 hours each day (specifically, *The Magic Flute*, Symphonies 40 and 41, and the Violin Concerto No. 5).
- 2 A second group of rats was exposed to an analogous schedule of atonal music by Schoenberg (specifically, *Pierrot Lunaire*, *A Survivor from Warsaw*, *Verklärte Nacht*, *Kol Nidre*, and Chamber Symphonies 1 and 2).
- 3 The rats were then placed individually in a test cage that was rigged so that the rat's presence on one side of the cage would trip a switch that caused previously unheard selections of Mozart to be played, whereas the rat's presence on the other side would generate new selections of Schoenberg.

Results: Rats raised on a musical diet of Mozart moved significantly more often to the side of the cage that led to Mozart being played, whereas those raised on a diet of Schoenberg moved more often to the side that led to Schoenberg's music being played.

The height of the bars represents the average number of minutes the rats who had earlier been exposed to either Mozart or Schoenberg chose to inhabit a side of their cage that led to Mozart or Schoenberg being played.

Conclusion: Exposure leads to liking. Being exposed to Mozart led to a preference for Mozart's music. Being exposed to Schoenberg led to a preference for Schoenberg's music.

- 1.1 The Power of the Situation and Helping
- 2.4 Honor Experiments
- 3.6 Comparison and Self-Esteem
- 4.5 Counterfactual Thinking among Olympic Medalists
- 5.4 Selective Attention
- 6.3 Induced Compliance and Attitude Change
- 7.1 Universality of Facial Expressions
- 8.4 Normative Social Influence
- 8.6 Interpretive Context and Conformity
- 9.8 Attitude Inoculation
- 10.4 Mere Exposure and Musical Preferences
- 10.6 Attraction to Average Faces
- 11.1 Harlow's Monkeys and Their "Mothers"
- 11.2 The Relational Self and Interactions with Others
- 11.9 Contempt and Marital Dissatisfaction
- 12.5 Distinctiveness and Illusory Correlation
- 12.7 Stereotypes and Categorization
- 13.6 Priming of Anger-Related Aggression
- 13.9 Empathy and Altruism
- 14.2 Social Facilitation on Simple and Complex Tasks
- 15.3 Health Benefits of Social Connection
- 15.6 Mental Accounting

You Be the Subject figures allow students to be their own research subjects and to experience the methods of social psychology.

FIGURE 10.3 You Be the Subject: The Mere Exposure Effect

Which image do you prefer, the one on the left or the one on the right?

Results: People prefer true photos of others, but mirror-image photos of themselves. (The one on the right is the true image.)

Explanation: People see themselves when they look in the mirror, which means that they are familiar with a reverse image of themselves—and this is the image they generally prefer. They see others, however, as they truly are and usually prefer this true image to a mirror image.

Focus On boxes in every chapter allow students to make connections between social psychology and a variety of areas like culture, government, sports, and business.

BOX 10.4 FOCUS ON POSITIVE PSYCHOLOGY

The Basis of Beauty

What makes the Golden Gate Bridge so aesthetically pleasing? Why do mathematicians describe certain proofs as “beautiful”? And why are pandas and harp seals considered more adorable than mollusks and vultures? Thinkers throughout the ages have pondered and argued about the nature of aesthetic beauty. Those who have taken the *objectivist* view, the ancient Greeks especially, argue that beauty is inherent in the properties of objects that produce pleasant sensations in the perceiver. Their goal has been to try to identify the stimulus features that have such effects—balance, proportion, symmetry, contrast, the Golden ratio. All of these and others have been put forward as important elements of beauty. Other scholars, those who subscribe to the *subjectivist* view, argue that “beauty is in the eye of the beholder” and therefore the search for general laws of beauty is futile.

Psychologists have recently offered a different view, one that attributes aesthetic pleasure to perceptual and cognitive fluency (Reber, Schwarz, & Winkielman, 2004). Fluency refers to the ease with which information can be processed. Some objects are more easily identified than others (perceptual fluency), and some are more easily interpreted, defined, and related to one’s existing semantic knowledge (cognitive fluency). The core idea is that the more fluently one can process an object, the more positive one’s aesthetic experience. An important part of this argument is that people experience pleasure when processing fluent stimuli. Electromyography (EMG) recordings of people’s faces reveal more activation of the zygomaticus major (the “smiling muscle”) when they are exposed to fluent stimuli rather than disfluent stimuli (Winkielman & Cacioppo, 2001). And another critical part of the argument is that all of the features that objectivists

regard as inherently pleasing—symmetry, contrast, and so on—tend to increase perceptual fluency.

Symmetrical patterns are processed efficiently and, as we have seen, symmetrical faces are considered particularly good looking—as are symmetrical structures like the Eiffel Tower, the Chrysler Building, and the Golden Gate Bridge. Objects characterized by high figure-ground contrast can be recognized especially quickly, and studies have found that laboratory stimuli with high contrast are judged especially attractive—as are flowers, goldfinches, and the photographs of Ansel Adams (Reber, Winkielman, & Schwarz, 1998). In addition to the impact of these classic aesthetic features, this perspective maintains that anything that increases the fluent processing of an object ought to increase its aesthetic appeal. Previous exposure to a stimulus makes it easier to process, and as we have seen, mere repeated exposure leads to greater liking. Prototypical members of a category are processed fluently, and as we have seen, people find “average” faces attractive—as well as average automobiles, birds, and fish (Halberstadt & Rhodes, 2000, 2003).

But how does this explain people’s aesthetic appreciation of complicated stimuli, such as Beethoven’s 9th symphony, the Bilbao Museum, or the ceiling of the Sistine Chapel? Simple stimuli are surely processed more fluently than complex stimuli, but the simplest things are not always the most pleasing. True enough. What seems to

be particularly appealing is “simplicity in complexity.” People seem to like those things that are processed more easily than one might expect given their overall complexity. Processing a simple image fluently is often unsatisfying; but a complex image or sound pattern that is made accessible by some underlying structure often yields the greatest sensation of aesthetic pleasure. This also explains why experts in a given domain—music, architecture, painting—often have more elaborate aesthetic tastes than novices. Their expertise allows them to process complex material more fluently.

This fluency perspective on aesthetic beauty thus occupies a middle ground between the objectivist and subjectivist views. Beauty is indeed in the eye of the beholder, but not in the sense that it is completely arbitrary and variable from person to person. Rather, beauty lies in the processing experience of the beholder, experience that is strongly determined by how objective stimulus properties influence perceptual and cognitive fluency.

Positive Psychology Symmetrical stimuli are easy to process (i.e., they’re fluent) and, like fluent stimuli in general, tend to be experienced as aesthetically pleasing. The symmetry of the Golden Gate Bridge may be one reason it is regarded as one of the most beautiful bridges in the world.

W. W. NORTON & COMPANY • NEW YORK • LONDON

W. W. Norton & Company has been independent since its founding in 1923, when William Warder Norton and Mary D. Herter Norton first published lectures delivered at the People's Institute, the adult education division of New York City's Cooper Union. The firm soon expanded its program beyond the Institute, publishing books by celebrated academics from America and abroad. By midcentury, the two major pillars of Norton's publishing program—trade books and college texts—were firmly established. In the 1950s, the Norton family transferred control of the company to its employees, and today—with a staff of 400 and a comparable number of trade, college, and professional titles published each year—W. W. Norton & Company stands as the largest and oldest publishing house owned wholly by its employees.

About the Authors

THOMAS GILOVICH is Professor of Psychology and Co-Director of the Center for Behavioral Economics and Decision Research at Cornell University. His research focuses on how people evaluate the evidence of their everyday experience to make judgments, form beliefs, and decide on courses of action. He is the recipient of the Russell Distinguished Teaching Award for teaching social psychology, statistics, and human judgment at Cornell. He is a fellow of the American Psychological Society, the American Psychological Association, the Society for Personality and Social Psychology, the Society of Experimental Social Psychology, and the Committee for Skeptical Inquiry. His other books include *How We Know What Isn't So: The Fallibility of Human Reason in Everyday Life*, *Why Smart People Make Big Money Mistakes—and How to Correct Them* (with Gary Belsky), and *Heuristics and Biases: The Psychology of Intuitive Judgment* (with Dale Griffin and Daniel Kahneman).

DACHER KELTNER is Professor of Psychology and the Director of the Greater Good Science Center at the University of California at Berkeley. His research focuses on the prosocial emotions, such as love, sympathy, and gratitude, morality, and power. He is the recipient of the Western Psychological Association's award for outstanding contribution to research, the Positive Psychology Prize for excellence in research, the Distinguished Teaching Award for Letters and Sciences (for his teaching of Social Psychology for the past 15 years), and the Distinguished Mentoring Award at UC Berkeley, and is a fellow of the American Psychological Association, the American Psychological Society, and the Society for Personality and Social Psychology. In 2008, the *Utne Reader* listed Dacher as one of the 50 visionaries changing the world. He is the author of three other books, including *Born To Be Good: The Science of a Meaningful Life* and *The Compassionate Instinct*.

RICHARD E. NISBETT is Theodore M. Newcomb Distinguished University Professor of Psychology at the University of Michigan and Research Professor at Michigan's Institute for Social Research. His research focuses on how people from different cultures think, perceive, feel, and act in different ways. He has taught courses in social psychology, cultural psychology, cognitive psychology, and evolutionary psychology. He is the recipient of the Distinguished Scientific Contribution Award of the American Psychological Association and the William James Fellow Award of the American Psychological Society and is a member of the National Academy of Sciences and the American Academy of Arts and Sciences. His other books include *Intelligence and How to Get It*, *The Geography of Thought: How Asians and Westerners Think Differently . . . and Why*, *Human Inference: Strategies and Shortcomings of Social Judgment* (with Lee Ross), *The Person and the Situation* (with Lee Ross), and *Culture of Honor: The Psychology of Violence in the South* (with Dov Cohen).

PART ONE The Science of Social Psychology 2

CHAPTER 1 An Invitation to Social Psychology 4

Characterizing Social Psychology 7

Explaining Behavior 7 | Comparing Social Psychology with Related Disciplines 10 | Proximal and Distal Influences in Social Psychology 10

The Power of the Situation 11

The Milgram Experiment 12 | Seminarians as Samaritans 14 | Channel Factors 14 | The Fundamental Attribution Error 15

The Role of Construal 16

Interpreting Reality 17 | Schemas 19 | Stereotypes 20

Automatic versus Controlled Processing 21

Types of Unconscious Processing 22 | Functions of Unconscious Processing 23

Evolution and Human Behavior: How We Are the Same 24

Human Universals 25 | Group Living, Language, and Theory of Mind 26 | Evolution and Gender Roles 28 | Avoiding the Naturalistic Fallacy 28 | Social Neuroscience 29

Culture and Human Behavior: How We Are Different 30

Cultural Differences in Self-Definition 30 | Individualism versus Collectivism in the Workplace 33 | Dick and Jane, Deng and Janxing 34 | **BOX 1.1** FOCUS ON CULTURE: Individualism or Collectivism in Business Managers 35 | Who Are You? 35 | Culture and Gender Roles 36 | Some Qualifications 38 | Culture and Evolution as Tools for Understanding Situations 38

Summary 39 | Key Terms 40 | Further Reading 40 | Online Study Tools 41

CHAPTER 2 The Methods of Social Psychology 42

Why Do Social Psychologists Do Research (And Why Should You Want to Read about It)? 44

BOX 2.1 FOCUS ON INTUITIVE SOCIAL PSYCHOLOGY: Predicting the Results of Social Psychology Studies 46

How Do Social Psychologists Test Ideas? 47

Observational Research 47 | Archival Research 47 | Surveys 48 | Correlational Research 50 | Experimental Research 53 | **BOX 2.2** FOCUS ON SCIENTIFIC METHOD: Thinking about Correlations 54

Some Other Useful Concepts for Understanding Research 56

External Validity in Experiments 56 | Internal Validity in Experiments 57 | Reliability and Validity of Tests and Measures 58 | Statistical Significance 58

Basic and Applied Research 59

Ethical Concerns in Social Psychology 60

Summary 62 | Key Terms 63 | Further Reading 63 | Online Study Tools 63

PART TWO The Individual in the Social World 64

CHAPTER 3 The Social Self 66

Nature of the Social Self 69

Evolution of the Social Self 69 | Culture, Gender, and the Social Self 74 | Situationism and the Social Self 76 | Construal Processes and the Social Self 78

Self-Knowledge 81

The Organizational Function of Self-Knowledge 82 | **BOX 3.1** FOCUS ON CULTURE AND NEUROSCIENCE: The Social Self in the Brain 83 | The Motivational Function of Self-Knowledge 86 | Illusions and Biases about the Self 88

Self-Evaluation 91

Trait and State Self-Esteem 91 | Contingencies of Self-Worth 92 | Social Acceptance and Self-Esteem 93 | Motives for Self-Evaluation 94 | Culture and Self-Esteem 98 | Possible Dangers of High Self-Esteem 99

Self-Presentation 100

Ideas about the Public Self 102 | Self-Handicapping: Protecting Your Own Face 103 | **BOX 3.2** FOCUS ON HEALTH: Dying to Present a Favorable Self 104 | Self-Presentation, Flirtation, and Teasing 105

Summary 107 | Key Terms 108 | Further Reading and Films 108 | Online Study Tools 109

CHAPTER 4 Understanding Others 110

From Physical Appearance to Inferences about Personality Traits 112

The Accuracy of Snap Judgments 114

From Acts to Dispositions: The Importance of Causal Attribution 115

The Pervasiveness and Importance of Causal Attribution 115 |
Explanatory Style and Attribution 116

The Processes of Causal Attribution 119

Attribution and Covariation 120 | Attribution and Imagining Alternative
Actors and Outcomes 122

Errors and Biases in Attribution 128

The Self-Serving Bias 128 | **BOX 4.1** FOCUS ON DAILY LIFE: Self-Serving
Attributions 129 | The Fundamental Attribution Error 131 | Causes of
the Fundamental Attribution Error 135 | **BOX 4.2** FOCUS ON COGNITIVE
PROCESSES: Weighed Down by Anchors 138 | The Actor-Observer Difference
in Causal Attributions 140

Culture and the Fundamental Attribution Error 142

Cultural Differences in Attending to Context 142 | Causal Attribution for
Independent and Interdependent Peoples 144 | Priming Culture 144 |
Dispositions: Fixed or Flexible? 145 | **BOX 4.3** FOCUS ON DIPLOMACY:
One Cause or Many? 147

Beyond the Internal/External Dimension 147

Summary 148 | Key Terms 149 | Further Reading 149 |
Online Study Tools 149

CHAPTER 5 Social Judgment 150

Why Study Social Judgment? 152

The Information Available for Judgment 153

Biases in Information Presented Firsthand 153 | **BOX 5.1** FOCUS ON
DAILY LIFE: Flashbulb Memories 158 | Biases in Information Presented
Secondhand 159

How Information Is Presented 163

Order Effects 164 | Framing Effects 165

How Information Is Sought Out 167

Confirmation Bias 167 | Motivated Confirmation Bias 169

Prior Knowledge and Knowledge Structures 170

How Do Schemas Influence Judgment? 171 | How Is New Information
Mapped onto Preexisting Schemas? 174 | **BOX 5.2** FOCUS ON DAILY LIFE:
Self-Fulfilling Prophecies 176

Reason, Intuition, and Heuristics 178

The Availability Heuristic 179 | Availability's Close Cousin: Fluency 183 |
The Representativeness Heuristic 184 | **BOX 5.3** FOCUS ON CULTURE:
Predictions East and West 188 | **BOX 5.4** FOCUS ON SPORTS: Hot Hands
and Cold Statistics 190 | The Joint Operation of Availability and
Representativeness 191

Summary 193 | Key Terms 195 | Further Reading 195 |

CHAPTER 6 Attitudes, Behavior, and Rationalization 196

Predicting Behavior from Attitudes 199

Attitudes Sometimes Conflict with Other Powerful Determinants of
Behavior 200 | Attitudes Are Sometimes Inconsistent 200 | Attitudes Are
Sometimes Based on Secondhand Information 202 | The Mismatch between
General Attitudes and Specific Targets 203 | "Automatic" Behavior That
Bypasses Conscious Attitudes 205

Predicting Attitudes from Behavior 206

Cognitive Consistency Theories 207 | Experiencing and Reducing
Dissonance 208 | When Does Inconsistency Produce Dissonance? 214 |
Self-Affirmation and Dissonance 217 | Is Dissonance Universal? 217 |
BOX 6.1 FOCUS ON CULTURE: Culture and Priming Effects of "Social" Stimuli
in the Free-Choice Paradigm 218

Self-Perception Theory 219

Inferring Attitudes 219 | Evidence of Self-Directed Inference 220 | Testing
for Arousal 221 | **BOX 6.2** FOCUS ON EDUCATION: The Overjustification
Effect and Superfluous Rewards 222 | Reconciling the Dissonance and
Self-Perception Accounts 224 | **BOX 6.3** FOCUS ON DAILY LIFE: Body
over Mind 225

Beyond Cognitive Consistency to Broader Rationalization 228

System Justification Theory 228 | Terror Management Theory 229

Summary 232 | Key Terms 233 | Further Reading 233 |

Online Study Tools 233

CHAPTER 7 Emotion 234

Characterizing Emotion 236

Differentiating Emotions from Other Feelings 237 | The Components of
Emotion 237

Universality and Cultural Specificity of Emotion 238

BOX 7.1 FOCUS ON NEUROSCIENCE: Felt and False Smiles 239 | Darwin and Emotional Expression 240 | The Universality of Facial Expression 240 | Cultural Specificity of Emotion 244

Emotions and Social Relationships 247

Emotions in Friendship and Intimate Relationships 248 | **BOX 7.2** FOCUS ON CULTURE: Flirtation and the Five Kinds of Nonverbal Display 251 | Emotions within and between Groups 252

Emotions and Social Cognition 253

Emotions Provide Information for Judgments 254 | Emotions Influence Reasoning 255 | Emotions and Moral Judgment 256

Emotion in the Mind and Body 258

William James and Emotion-Specific Physiology 258 | Schachter and Singer's Two-Factor Theory of Emotion 259 | Emotion in the Body: Evidence for ANS Specificity in Emotion 261

Happiness 263

The Determinants of Pleasure 264 | Knowing What Makes Us Happy 264 | The Happy Life 266 | Cultivating Happiness 267 | **BOX 7.3** FOCUS ON POSITIVE PSYCHOLOGY: Nirvana in Your Brain 268

Summary 269 | Key Terms 271 | Further Reading 271 | Online Study Tools 271

PART THREE Influencing Others 272

CHAPTER 8 Social Influence 274

What Is Social Influence? 276

Conformity 277

Automatic Mimicry 278 | Informational Social Influence and Sherif's Conformity Experiment 280 | Normative Social Influence and Asch's Conformity Experiment 281 | **BOX 8.1** FOCUS ON HEALTH: Bulimia and Social Influence 284 | Factors Affecting Conformity Pressure 285 | The Influence of Minority Opinion on the Majority 290

Obedience to Authority 293

The Setup of the Milgram Experiments 293 | Opposing Forces 295 | Would You Have Obeyed? 297 | **BOX 8.2** FOCUS ON TODAY: Would Milgram Get the Same Results Now? 298 | **BOX 8.3** FOCUS ON HISTORY: Step-by-Step to Genocide 303

Compliance 304

Reason-Based Approaches 304 | Emotion-Based Approaches 308 |

BOX 8.4 FOCUS ON POSITIVE PSYCHOLOGY: Resisting Social Influence 313

Summary 314 | Key Terms 315 | Further Reading 315 |

Online Study Tools 315

CHAPTER 9 Persuasion 316

The Basics of Attitudes 319

The Three Components of Attitudes 319 | **BOX 9.1** FOCUS ON NEUROSCIENCE: Is the Bad Stronger than the Good? 320 | Measuring Attitudes 321

Functions of Attitudes 322

The Utilitarian Function of Attitudes 322 | The Ego-Defensive Function of Attitudes 323 | The Value-Expressive Function of Attitudes 324 | The Knowledge Function of Attitudes 326

Persuasion and Attitude Change 327

A Two-Process Approach to Persuasion 328 | The Who, What, and Whom of Persuasion 330 | **BOX 9.2** FOCUS ON MODERN LIFE: A Subliminal Route to Persuasion? 331 | **BOX 9.3** FOCUS ON POP CULTURE: Lie to Me 335

The Media and Persuasion 339

The Surprisingly Weak Effects of the Media 340 | The Media and Conceptions of Social Reality 342 | **BOX 9.4** FOCUS ON THE MEDIA: The Hostile Media Phenomenon 343

Resistance to Persuasion 343

Attentional Biases and Resistance 344 | Previous Commitments and Resistance 346 | **BOX 9.5** FOCUS ON BIOLOGY: The Genetic Basis of Attitudes 347 | Knowledge and Resistance 347 | Attitude Inoculation 348

Summary 350 | Key Terms 351 | Further Reading and Films 351 |

Online Study Tools 351

PART FOUR Social Relations 352

CHAPTER 10 Attraction 354

Studying Attraction 356

Proximity 357

Studies of Proximity and Attraction 357 | Explanations of Proximity Effects 360 | **BOX 10.1** FOCUS ON DAILY LIFE: Liking, Disliking, and Proximity 361

Similarity 366

Studies of Similarity and Attraction 367 | **BOX 10.2** FOCUS ON DAILY LIFE: Do Couples Look More Alike over Time? 368 | But Don't Opposites Attract? 369 | Why Does Similarity Promote Attraction? 370

Physical Attractiveness 372

Impact of Physical Attractiveness 372 | Why Does Physical Attractiveness Have Such Impact? 376 | **BOX 10.3** FOCUS ON HEALTH: The Flight to Thinness 378 | Sex Differences in Mate Preferences and Perceived Attractiveness 383 | **BOX 10.4** FOCUS ON POSITIVE PSYCHOLOGY: The Basis of Beauty 384

Theoretical Integration 391

The Reward Theory of Interpersonal Attraction 391 | The Social Exchange Theory of Interpersonal Attraction 393

Summary 394 | Key Terms 395 | Further Reading 395 |
Online Study Tools 395

CHAPTER 11 Relationships 396

Characterizing Relationships 398

The Importance of Relationships 400

The Need to Belong 400 | The Costs of Social Rejection 403

The Origins of How We Relate to Others 405

Preface

A FRESH PERSPECTIVE IN SOCIAL PSYCHOLOGY

Social psychology illuminates and clarifies the nature of human beings and their social world. It is a science that offers novel insights into the foundations of moral sentiments, the origins of violence, and why people fall in love. It offers basic tools for understanding how people persuade one another, why people are so prone to mass phenomena, and how people rationalize their undesirable actions. It offers science-based answers to questions humans have been thinking about since we started to reflect upon who we are: Are we rational creatures? How can we find happiness? What is the proper relationship of the individual to the larger society?

After decades of collective experience teaching social psychology, we decided in 2000 to put pen to paper (or fingers to keyboard) and write our own vision of this fascinating discipline. It was a great time to do so. Many new developments in the field were reshaping social psychology. Ten years of study had revealed how different kinds of culture—country of origin, regional culture, social class—shape human thought, feeling, and action. Insights from evolutionary theory were increasingly guiding how social psychologists study things such as homicide and cooperation. Social psychologists were making inroads into the study of the brain. Specific areas of interest to us—judgment and decision making, emotion, and relationships—had emerged as well-defined areas deserving full treatment. And the findings of social psychology had become recognized as more relevant than ever before. Social psychological studies were making their way into best sellers, written by journalists such as Malcolm Gladwell and psychologists such as Dan Ariely and Dan Gilbert. Social psychology had begun to shape political campaigns and is currently having an influence on the policies of the current U.S. administration (for example, through the social psychological ideas advanced in the book *Nudge*).

The lure of writing a textbook, and the challenge in doing so, was to capture all of these new developments and integrate them with the timeless classics of social psychology that make it such a captivating discipline. We also wanted to convey to the student that social psychology is a productive *scientific* enterprise. Much of the subject matter of social psychology—attraction, conformity, prejudice—readily engages the student's attention and imagination. The material sells itself. But in most textbook summaries of the field, the presentation comes across as a list of unconnected topics—as one fun and intriguing fact after another. As a result, the students often come away thinking of social psychology as all fun and games. That's fine up to a point. Social psychology *is* fun. But it is much more than that, and we have tried
